DSW GROUP PROJECT

MENTAL HEALTH

Background

We created the website *Let's heal* in order to raise awareness about mental health and disorders. Our visitors can read about mental health and watch a YouTube video explaining what mental health is and means as well as its significance. We also included information about the common different types of mental disorders, their causes, symptoms and signs as well as ways in which visitors with these mental disorders can self-cope. Included in our website are hotlines and mental health support groups that we suggest users make use of when in need of support or urgent assistance. In the case where a visitor needs to have a quick chat for some emotional support and assistance, we included a chatbot. Our visitors are also able to contact us by sending us their email address along with a message of their choice. The UML class diagram, sketches and Use Case diagram based on the development and flow of our website are on the following pages.

UML CLASS DIAGRAM

Sketch: Home

Logo	Home Types Myths vs Truths Support
Video	
<div>IMAGE</div> <div>Mental Health Introduction</div>	
Footer	

Onclick on the logo directs you to the home page.

Sketch: Types

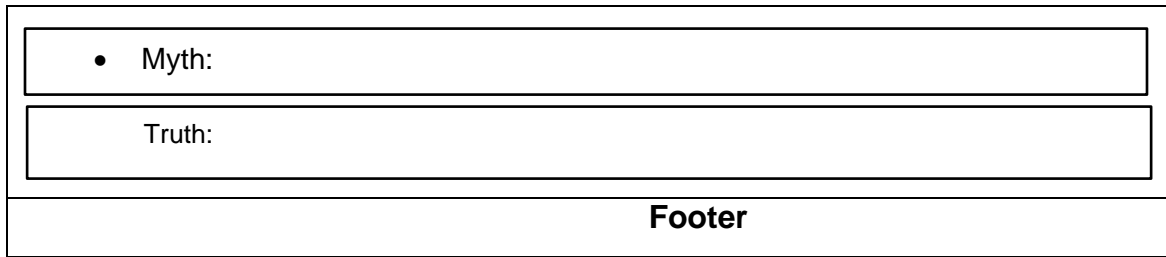

Dropdown shows the type of mental illness and onclick on each type directs you to that "type of mental illness"
